- The items are 'pulled' by team members, not 'pushed' by their executives
- The items are pulled just-in-time
- The number of works in progress can be limited
- Kanban can be displayed in the **Information Radiator**

Information Radiator: A display used for providing visual information by using charts, graphs, etc.

- The items are 'pulled' by team members, not 'pushed' by their executives
- The items are pulled just-in-time
- The number of works in progress can be limited
- Kanban can be displayed in the Information Radiator
- Timeboxes are NOT used in Kanban
- We need to have clear policies in Kanban
- Collaboration and experimental environment should be improved

UNDERSTANDING AGILE APPROACHES

Kanban

Properties of Kanban

- The workflow needs to be visualized
- The policies should be clear
- The collaborative environment should be improved
- Work in progress should be limited
- It is the workflow we manage
- There should be feedback loops

Some Principles

- To apply Kanban, we start with the current conditions
- We desire incremental change and continuous improvement
- We need to respect the existing environment
- We need to support and encourage leadership

Advantages of the Kanban Method

- Kanban reduces waste
- It increases efficiency, productivity and quality
- It attracts the team members' focus on the work they do
- It helps team members to focus on completed deliverables
- It prevents team members from being overloaded and provides a more 'homogenized' workload
- It provides flexibility
